

3. Click "Import" and browse to the XML file you downloaded in Step 1.
4. Ensure the "GoogleStyle" item is selected in the "Active profile" section.

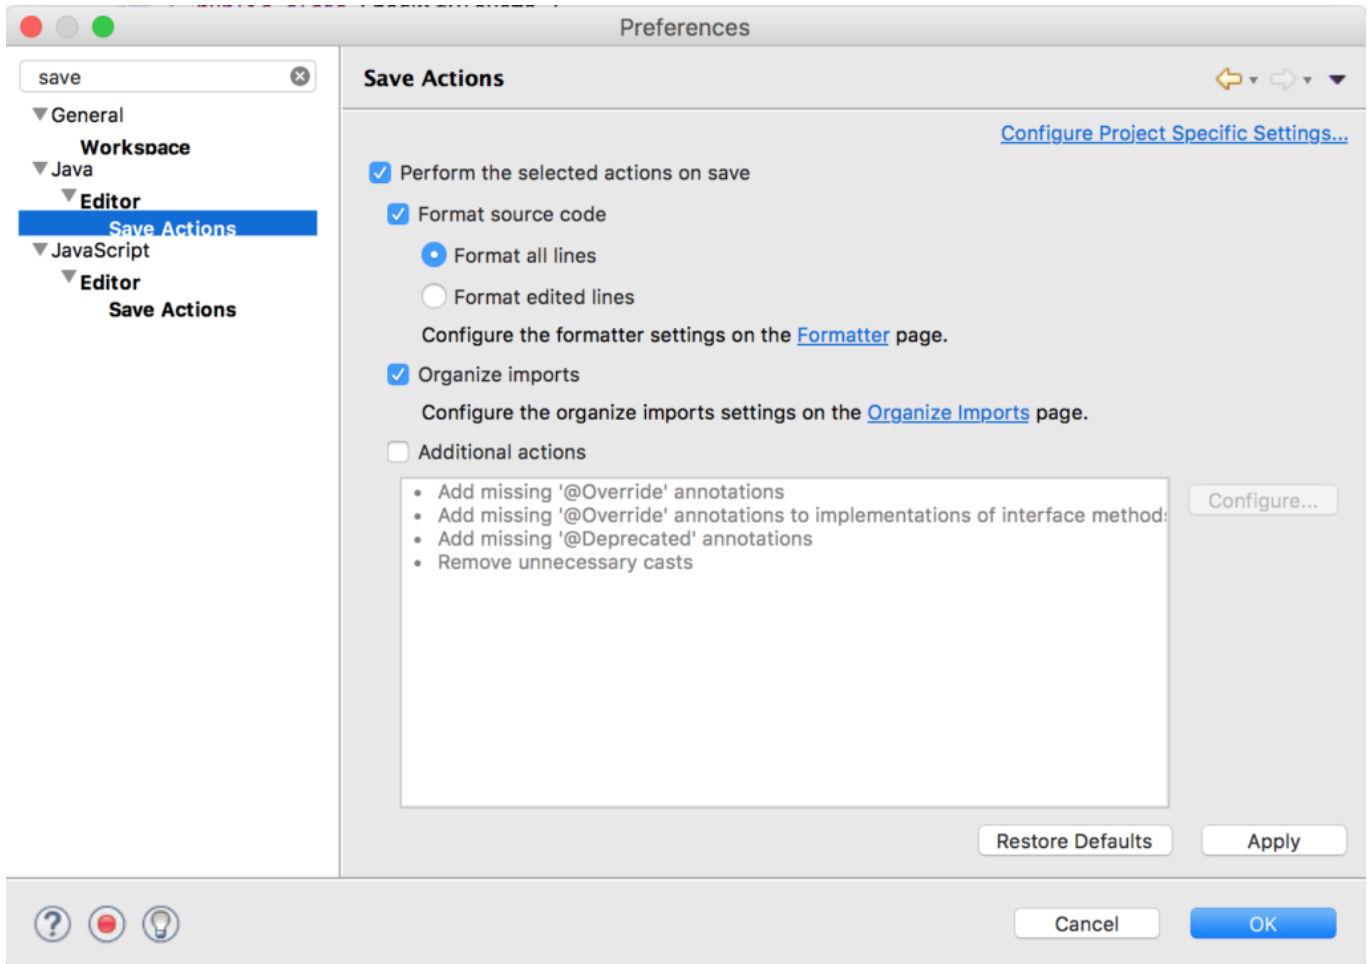

5. Click "OK".

<https://github.com/danacton/practices-of-mastery/blob/master/article-eclipse-style-google-java/article-eclipse-style-google-java.md#step-3-configure-save-actions-to>

automatically-format-your-code-when-saving) Step 3: Configure save actions to automatically format your code when saving

This is a game-changer!

1. In the Preferences menu (same as in Step 2), type “save actions”, and select Java -> Editor -> Save Actions.

2. Select “Perform the selected actions on save”.
3. Select “Format source code”.
4. Click the “Formatter” link and ensure the “GoogleStyle” formatter is selected as active.
5. Click OK.

Now, whenever you make changes to your code, you can use the format source code menu item, or just save the file and formatting will be applied automatically.
